Plan Final del Proyecto

1.   Project Option:
        1.   Fundamentals 4

1.   Brief description of the project
        1.   Abstraction
                1.   A program is required with which video information can be
                        stored
                2.   Comments are required to be entered for videos that were
                        previously entered
                3.   Video information is required to be displayed with your recorded
                        comments
        1.   Encapsulation
                1.   A program is required that allows you to store a purchase order with the
                        selected products.
                2.   It is required that the necessary orders are created and that there is an option
                        that allows you to generate the label of the shipments with the necessary
                        information
        2.   Inheritance
                1.   A program is required in which you can keep track of events, and keep track
                        of each one of them
                2.   It's important to set a base class so that all events can inherit shared attributes
                        and methods
        3.   Polymorphism
                1.   A program is required to keep track of activities by date, so that information
                        can be displayed in the form of a summary
                2.   It is important to duplicate shared attributes and methods, as well as override
                        methods for calculations
